Database Management Systems: Normalization & Transa

1NF, 2NF, 3NF, BCNF with Functional Dependency Examples

Author: Priya Patel (MCA) | ShelfShare Academic Resource

---

1. Relational Database Design and Anomalies Insertion, Update, Deletion.
2. Functional Dependencies and Armstrongs Axioms.
3. First Normal Form 1NF: Atomic attributes, elimination of repeating groups.
4. Second Normal Form 2NF: Full functional dependency on candidate keys.
5. Third Normal Form 3NF: Elimination of transitive dependencies.
6. Boyce-Codd Normal Form BCNF: Every determinant must be a candidate key.
7. ACID Properties of Transactions: Atomicity, Consistency, Isolation, Durability.
8. Concurrency Control: Two-Phase Locking 2PL and Serializability.
