Operating Systems: CPU Scheduling & Deadlock Manage

Comprehensive revision guide for university exams

Author: Rohan Mehta (B.Tech CSE) | ShelfShare Academic Resource

---

1. Process States: New, Ready, Running, Waiting, Terminated.
2. Process Control Block PCB and Context Switching overhead.
3. Scheduling Criteria: CPU Utilization, Throughput, Turnaround, Waiting, and Response time.
4. Algorithms: FCFS, SJF, Round Robin with Time Quantum, Priority Scheduling.
5. Synchronization: Critical Section Problem, Pettersons Solution, Semaphores.
6. Deadlock Conditions: Mutual Exclusion, Hold and Wait, No Preemption, Circular Wait.
7. Deadlock Avoidance: Bankers Algorithm with Safety Check.
